RESEARCH REPORT ON NEURO-DEGENERATIVE DISEASES IN BADE, EDERA DISTRICT, MAPPI, PAPUA, INDONESIA  
— Case Studies on Auyu and Jakay People —

Yosefina Griapon¹) and Arius Togodlli²)
1) Department of Anthropology, University of Cenderawasih, Papua, Indonesia
2) Department of Public Health, University of Cenderawasih, Papua, Indonesia

Background
· According to Article in Neurology, edition in February 1982, page 27, D. Carleton Gadjusek, MD and Andres M. Safazar, MD reported that there were Amyotrophic Lateral Sclerosis (ALS) and Parkinsonian syndrome in Bade and Edera Districts and they were two highly occurred diseases happened to Auyu and Jakay people¹).
· According to this report it is interesting to join survey between Kyoto University and Uncen medical teams to do research again on the fluctuation of ALS and Parkinsonian Syndrome.
· If there is an increase or decrease, hence, what are the causing factors.

Purpose
· Various factors may influence the increase or decrease of the diseases. To answer the problems of ALS and Parkinsonian Syndrome, we joined the surveys held on Okaba in January 2006, and the surveys on Bade in Ereda district in January 2007.
· These diseases frequently occur in Auyu and Jakay people. Hence, the research was focused on environmental and cultural factors (non-medical factors).

Method
· In the survey data were collected in neuro-degenerative patients and some people were treated in two different areas, Auyu and Jakay people, in Mur villages, Mappi regency and Osso, Bosuma, Ogorito, Asset, Kofeta, Homlikya, Geturki, Gimikya villages, and in Bade medical center.
· Medical check and treatment
· Interview
  - Patients
  - The family of the patients
  - Paramedic
  - Community leaders
· Observation
  - Observation was done during the survey, medical check and interview in two mentioned locations.

Results
· General
  - According to Dr. Hery, during his 15 years’ duty in Merauke and Mappi regencies, he has never found any ALS and Parkinsonian patients, but he also has read books and seen internet web site, and learned that the occurrence of these diseases was high on Auyu and Jakay people in Mappi and Bade areas some years ago.
  - The emerging diseases in Mappi regency are Malaria, Pneumonia, TBC and HIV / AIDS.
  - Stroke and diabetes often occur on non-native people. Native people rarely suffer from stroke and paralysis.
  - The knowledge of paramedic in Mappi and Bade public health centers was very limited. They don’t know the indications and causes of neuro-degenerative diseases.
Research Report on Neuro-Degenerative Diseases in Papua, Indonesia

• Specific (Mur village case)
- The survey held in Mur village, which is located on the River Mappi bank, found 4 patients with different diseases within 2 hours (see table 1).
- According to the data in table 1, food, age, environment, nature, activities and culture are much influencing the patients’ health conditions.
- Their beliefs in supernatural powers and matters prevent them from going to medical centers.
- There are habits of smoking, betel vine chewing, drinking local alcoholic drinks, and submerging in the river.
- The suffering body parts were head, knee, feet, and part of left hand in the four patients.
- There is a habit of carrying things on the left shoulder, and having only 1 meal a day.
- Hunting, sago gathering and fishing dominate their daily life from morning to evening.

• Specific (Edera District in Bade, Public Health Center)
- The tariff of medical services in Bade community health center is not balanced with the capability of the people. As a result, the people are less participating.
- There were 7 Auyu patients suffering from the same indication that comprise one paralysis case of Auyu tribe, one patient from Moi tribe, Sorong, two patients from Sulawesi Selatan who work as medical personnel, farmer, fisherman, harbor labor, and house wife.
- The initial indications were the same. Almost all of them started to suffer in 2000 - early 2007. They suffered from difficulty in talking, standing and walk, drooling, and blurred eyes.
- The suffering parts of body were namely partial weaknesses on the left or right parts of their bodies, stress in their feet or hands muscles, skinny, difficulty in moving hands and feet, cold, cramp, difficulty in moving feet fingers and shoulder, pain on back and sudden puffy. (See table 2)
- The cultural view still influences the way of thinking of most of Auyu people in Bade by believing that sickness and diseases are caused by:
  · Self or others deeds.
  · Their bodies are attacked by supernatural

creatures living in the jungle and river.
  · Their bodies are troubled by personalistic disturbances as a result of social jealousy among AuYu and Jakay people.
- There is a lack of medical treatment for ALS syndrome, parkinsonian and other diseases related to nerves and bones. Therefore, patients who suffer from such indications are treated at home by their family with only very simple treatments.

· Specific (Ogorito Village Cases)
  - 2 cases were found in Ogorito village with the same indications in their ages of 30-34 years old. Both cases indicated the same signs, epilepsy, drooling, unable to walk, to eat and to stand, their left part of body was paralyzed. This started when the patient was in the farm alone.
  - According to the information from the patient’s family, this sickness was caused by a supernatural creature called Kase, because he had seduced somebody's wife or husband. The patient had not done cultural confession and could get worse and could be transferred to his descendants if he is married.
  - There is a belief that sickness and diseases will not happen if somebody doesn't do anything wrong towards nature and social cultural environments.

### Specific (Osso Village Cases)

- There were 5 patients in Osso village. One 60-year-old patient started to get sick when she was thinking about her dead husband and dead 4 children. Her suffering parts of body were thigh bones, feet, weak nerves, skinny body and weak brain. Four other patients suffered from rheumatism on their feet and hands as a result of cold weather, hard working and submerging.

- Less consuming healthy/nutritious food.

- Teeth sickness as a result of improper feeding and consuming unboiled water.
